KINNEAR STEEL ROLLING DOORS are easy to operate, being properly counterbalanced by oil tempered helical springs contained in the steel tube about which the curtain rolls, and friction has been reduced to a minimum by bearings that are mechanically correct.

KINNEAR CURTAINS are constructed of interlocking slats rolled from copper bearing steel, properly formed to give great strength and are galvanized by our own special hot process. Edges of curtains re-inforced by malleable castings, keep the slats in perfect alignment, and prevent wear. The grooves are made from steel angles.

KINNEAR STEEL ROLLING DOORS are all fire resisting and a barrier against burglary.

Two distinct types may be had: Service doors and labeled Underwriters' doors, the latter being constructed from specifications that have been approved by the National Board of Fire Underwriters'.

KINNEAR STEEL ROLLING DOORS are operated either manually (push up), endless chain, crank or electrically.

Our Mechanical Engineers will gladly assist in solving your door problems.

I-R ROCK DRILLS

The line of I-R Rock Drills include a type of drill for each rock drilling condition. They are divided into three main types:

"Jackhamer"—An automatically rotated hammer type rock drill, hand held or mounted and used in all kinds of general rock drilling and down hole work. There are 5 sizes.

"Stopehamer"—An air feed drill for putting in holes which are 20° above the horizontal. There are 4 sizes.

"Drifter" — A mounted (in shell or cradle) rock drill of heavier design than either of the above, mostly used for drifting or tunnel work. There are 10 sizes.

Other Styles—In addition to the various sizes of the different types of drills mentioned above there are many styles such as wet or dry, with or without anvil block, etc.

Leyner Rock Drill Steel Sharpeners, which this company also manufactures, will make and resharpen perfectly formed and accurately gauged bits of all sizes and types.

Where Westinghouse Serves

At home, at work, at play, and on your way from one to the other, you live in an electrified world made possible by the generation and transmission of *alternating current*—the great contribution of George Westinghouse to his fellow men.

The organization which he founded has made the application of this power to every phase of human activity so natural and simple that few realize how it has revolutionized our civilization.

IR ENGINES

Oil, Gas and Steam

Ingersoll-Rand Type "PO" horizontal, single-cylinder, direct injection oil engines operating on the four-stroke cycle. Built in 50, 100 and 150 B.H.P. sizes.

Type "PR" vertical, three or more cylinder oil engines. Built in 105 to 1000 B.H.P. sizes.

Fuel injection is direct and positive without the use of compressed air. Ignition is by temperature of compression only and no hot bulb or plates are used. Cylinder barrels and heads are entirely water jacketed.

I-R single-cylinder horizontal gas engines. Built in 55 and 135 B.H.P. sizes.

Price-Rathbun vertical, multi-cylinder, natural and producer gas engines, built in 75 to 1400 B.H.P. sizes.

I-R steam engines are for steam pressures of 80 to 175 pounds in from 12 to 81 B.H.P. sizes.

PLANT

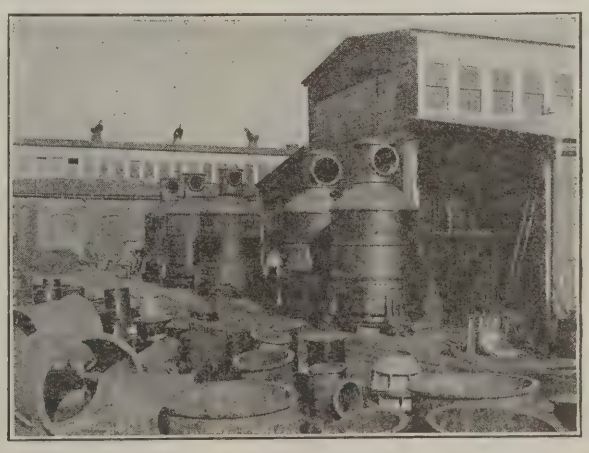
Our plant at Kutztown, Pa., consists of pattern shop, foundry, machine shop, storage sheds and yard, equipped with the most modern machinery for preparing moulds, machining and finishing castings, and the handling of heavy pieces from one part of the plant to another.

The foundry is equipped to handle castings of any shape and size up to 15 tons, poured in green or dry sand or loam moulds.

Castings up to 16 feet in diameter can be finished in our machine shop which is equipped with suitable boring mills, lathes, planers, drills and other machinery.

SERVICE

We build cast iron equipment to drawings and specifications, making such tests as may be necessary.



Equipment cast in more than one piece is assembled before shipment to insure accurate fit.

CASTINGS

Special attention is given to the mixture of the iron, which is controlled by analysis to secure a casting of the proper structure, suitable for the intended use.

1802 DU PONT 1924

Explosives and Blasting Accessories

UPON the selection of suitable explosives for contracting, mining or construction work depends to a large extent economical, expeditious and satisfactory progress. To purchasers of explosives, the du Pont Company offers an extensive variety of explosives based on the experience of 122 years of activity in the explosives industry. It has twenty-four powder plants situated at strategic points to serve its customers and to ensure to them an adequate supply of efficient explosives.

High Explosives and Blasting Powder

For contracting, ore mining and quarrying, the following brands of du Pont Explosives are widely used: Red Cross Extra; Red Cross, du Pont and Quarry Gelatin; Blasting Gelatin; du Pont Straight (Nitroglycerin); Durox, du Pont, Pacific and Repauno Stumping Powders.

For railroad construction and excavations, specify Red Cross Extra, du Pont, Quarry and Red Cross Gelatins where rock is encountered; du Pont, Pacific and Repauno Stumping Powders where shale and clay are located. du Pont RRP (railroad powder) for open work that is comparatively dry—is also extensively used.

For clearing land of stumps and boulders. Red Cross Extra and Improved Pacific Stumping Powder.

Coal mining. The du Pont Company makes two kinds of explosives for blasting coal—Blasting Powder and Permissible Explosives.

Blasting powder. This is made in a variety of granulations to permit selecting and using the granulation best adapted to mining requirements. There are two grades—"A" Blasting containing saltpetre and the "B" Blasting having nitrate of soda as one of its ingredients. Each kind is packed in 25-pound steel kegs with a special type of opening to facilitate removal of powder.

Permissible explosives. For blasting in gaseous and dusty coal mines, specify Monobel, Carbonite, Gelobel or Duobel which are approved by the Bureau of Mines.

Each of these brands has several different varieties, thereby providing a type of explosive exactly adapted to coal mining conditions. All are low-freezing—the thawing hazard being practically eliminated.

Permissible Explosives are made in cartridge form and packed in cases containing about 50 pounds, net weight. The number of cartridges in a 50-pound case is variable owing to the composition, method of packing and dimensions of cartridges.

Specific information concerning any brand of du Pont explosives will be furnished promptly if inquiry is addressed to any of our Branch Offices listed in the Address and Local Distributors Section of this book.

Blasting accessories. To obtain the maximum efficiency of du Pont Explosives, use the Blasting Accessories made by the du Pont Company. Its 122 years of experience in the development and production of explosive and detonating agents is your assurance of reliable and efficient performance of any of the following Blasting Accessories:

Blasting Caps, Electric Blasting Caps, Blasting Machines, Galvanometers, Rheostats, Delay Electric Blasting Caps, Delay Electric Igniters, Leading Wire, Cap Crimpers and Fuse.

A copy of our Blasting Accessories Catalog giving a complete description of du Pont Blasting Accessories may be obtained by sending request to any of our Branch Offices listed in the Address and Local Distributors Section of this book.

Sporting and Military Powders for All Purposes

The du Pont Company manufactures a wide variety of powders adapted to the requirements of modern firearms of standard types. Its products have a world-wide reputation for dependability under all conditions where du Pont powders were subjected to the most exacting tests.

Detailed information regarding Sporting and Military Powders will be supplied promptly by any of our Branch Offices whose addresses are given in the Address and Local Distributors Section of this book.

Since 1802 the du Pont Company has produced explosives of various types to comply with the varied requirements of explosives users. It has acquired a vast amount of practical knowledge about the actual performance of certain types of explosives when used for a particular purpose. If you have an explosive problem, tell us what it is—its solution is very likely known to us. Why not avail yourself of this type of service rendered by the leaders in the explosives industry?

Unclimbable factory fences and powerful electric weld factory gates, in chain link or other wire, erected 6', 7', 8' and higher. Thoroughly galvanized. Retain alignment.

Low and high chain link, woven wire, and other types of lawn fences, with iron picket or wire-filled gates. Galvanized, strong, durable. Every type available for public or private installation.

Railings and Gates, made by a new exclusive process of electric-weld. Pickets cannot fall—panels will not sag. Erected on brick, stone, iron or other columns, or upon Anchor Post channel uprights.

Write, wire, or phone our Main Office or the Sales and Erecting Office nearest you.

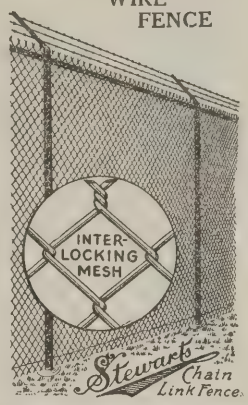
PLANT APPEARANCES ARE IMPROVED

—and many other advantages derived from an everlasting Stewart iron fence.



It is the ONE FENCE that undesirables cannot get through. Every picket is a bar of protection. It has proven its value to The Firestone Tire & Rubber Co., L. C. Smith Typewriter Co., Procter & Gamble Co., Bullock Electric Co., and hundreds of other industrial plants.

Railroads are extensive users of Stewart's iron fence for right-of-way, inter-track, concourse, street protection, depot sheds, etc.

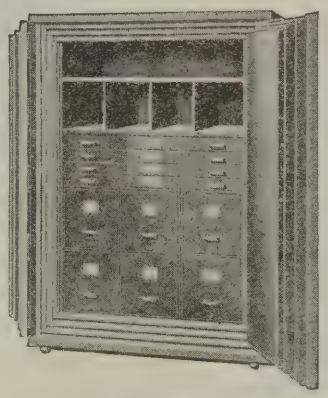
The Complete Line of Steel Office Equipment

Those who have learned the lasting satisfaction of buying only nationally-known, dependable merchandise, investigate "Allsteel" before they buy.

GF Allsteel Filing Cabinet

The GF Allsteel Line of Vertical Files is built to meet the needs of modern business from every standpoint. Practically every conceivable style of record may be filed in this line of Uprights—there is a file for every size of record, from the 5″ x 3″ index card up to legal size papers, 18″ x 14″.

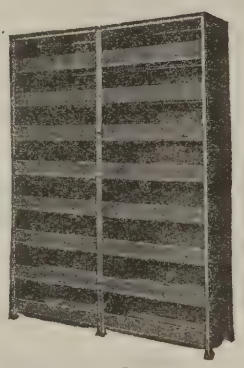


The space-saving feature of steel furniture is carried out to the utmost degree in GF Allsteel Uprights—a saving of 15 to 25 per cent over ordinary files for floor area occupied.

This feature, plus the rigid GF Allsteel construction secured by electric and acetylene welding; a patented, progressive roller suspension which causes the drawers to coast in and out easily and noiselessly whether light or loaded; dust lip at every drawer; thin, easy-running and absolute locking steel follower block, and the handsome, dignified design and finish, give to this line of GF Allsteel Files certain individual merits found in no other line.

GF Allsteel Desks and Tables

Whether for durability, beauty or convenience, your need can be satisfied in the Allsteel Line of Desks and Tables. Eliminating the center legs gives more foot room—a new comfort feature that every business man will appreciate. Linoleum tops are sanitary, stain and wear-proof, and make a working surface that is pleasing and comfortable in all climates. The cold-drawn bronze binding strips, cast bronze, brush-finished column footings and drawer pulls will never show wear. Privacy is afforded by a lock on all drawers in right-hand pedestal. Locks for other drawers can also be furnished.



GF Allsteel Safes

Allsteel safes are made in three lines—the underwriters' models with class A label and class B label and the commercial line.

They are designed and built to meet modern needs for a dependable fireproof safe.

Our Safe Catalog, sent free for the asking, gives you valuable information about safes.

GF Allsteel Shelving

Built from simple, fundamental units, Allsteel Shelving is quickly installed, easily moved, low in first cost and wears for years and years. It is fire resistive, much stronger than wood shelving and in many cases no more costly.

The above are only a few examples of the comprehensive line of

Van Dorn *Filing Equipment*

Steel files, steel office furniture, steel shelving and steel record safes have become largely standardized, and yet there are on the market *distinct degrees of quality* even at similar prices. The new Van Dorn line not only incorporates every construction feature that has proved valuable, but represents an exceptionally high type of skilled workmanship. This will be evident on careful examination—it will be doubly evident after the equipment has gone into service for you! May we send catalog?

Donley Fireplace Necessities

These necessities insure fireplace satisfaction by giving cleanliness, perfect draft control, maximum warmth and fuel economy.

The Fireplace Damper, either rotary or poker control, provides smooth, properly formed metal throat and a means for controlling draft. Guards against smoking, soot smudges, waste of heat up chimney and gives maximum warmth with fuel economy.

The Donley Fire Basket combines beauty and utility. Harmonizes with all decorative schemes. Narrows for properly splayed hearth. Removable ends. **Donley Ash Dumps** are iron trap doors closing ash pit and excluding dust and odors.

The Donley Ash-pit Door or Clean-out Door is strong, neat and a close fit.

Send for the Donley Book of Fireplaces containing fireplace designs and construction plans.

Fireproofing Building Materials

The qualities of a good fireproofing material are the result of years of study and experience. The best satisfaction is therefore secured by buying a known, dependable line. Before purchasing write for prices.

Herringbone Rigid Metal Lath

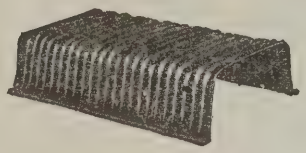
This lath offers many desirable features—rigidity, uniformity, wider stud spacing, and true economy in time, labor and plaster.

"Trussit"

Trussit is a corrugated expanded sheet, which forms the base and reinforcement for plaster walls and partitions. It eliminates the use of studding.

G. F. Self-Sentering

This combined reinforcing material and form decking for concrete floors, roofs and walls fills every need for speed, economy and permanence in building.



G. F. Steel Lumber

Used instead of wood for joists and studs in floor and partition work. For safety, economy and fireproofing it is ideal.

G. F. Peds

Peds, as "spot grounds" for attaching wood or metal trim to walls and sleepers to concrete floors save time, labor and material.

G. F. Steel Tile

These are light steel forms of various depths for use with concrete in joisted floor construction. They offer unusual economy combined with strength.

G. F. Waterproofings

G. F. No. 10—Integral waterproofing Paste.
G. F. No. 11—Integral waterproofing Powder.
G. F. No. 17—Mop Coating.

Kreodone Interior Wood Block Floors

KREODONE BLOCKS form the best heavy duty floor that has ever been developed.

For more than twenty years they have stood without an equal for durability and economy.

Made from the best of long-leaf yellow pine. Preserved with the highest grade of pure creosote oil on the market. They never bleed tar.

Write us for particulars and figures.

Heavy Duty Floors

The vibration of heavy machinery, the pounding of endless lines of trucks cannot harm Creo-pine Wood Block Floors. They are built for heavy duty. They stand up under any and all conditions.

Creo-pine Wood Block Floors are *permanent* floors. Installation can be made without interfering with production.

Write for detailed information today.

Complete Industrial Furnace Equipment

COAL—OIL—GAS—ELECTRICITY

We make a specialty of designing and constructing modern industrial heating equipment, irrespective of purpose or fuel, for the metallurgical, chemical, ceramic and other industries.

Automatic Rotary Furnace and Quenching Tank

Our practical experience of over 30 years is illustrated by the following list of furnaces, practically all of which we have built in a variety of types and sizes, for different fuels, to suit individual requirements.

Continuous Heat-Treatment Furnaces

Angle Heating Furnaces
Annealing Furnaces
Automatic Furnaces
Billet Heating Furnaces
Blast Gates, New Airtight and "Kwikleen"
Blowers
Burners
Carbonizing Furnaces
Continuous Furnaces
Cyanide Furnaces
Drying Furnaces
Electric Furnaces
Enameling Furnaces

Economy Combustion Chamber Furnaces

With

Automatic Preheating and Oil Straining Devices

The **Economy Oil Furnace** is designed so that perfect combustion will be obtained before the fuel enters working chamber of furnace, and is a departure from the old method of burning oil. It is not necessary to purchase high grade oil as we can burn the lowest grade of fuel oil and obtain satisfactory results.

In addition to a large saving of oil over other types of furnaces, all **Smoke** and **Gas** are **eliminated.**

HAMMER FURNACE, No. 20

Our line of furnaces consists of all types of Forging Furnaces, Bulldozer Furnaces, Plate Furnaces, Flue Welding Furnaces, Rivet Heating Furnaces, Annealing and Heat Treating Furnaces, Automatic Feed Furnaces, Case Hardening Furnaces, Spring Fitting Furnaces, Tool Tempering Furnaces, Babbitt Furnaces, Car Bottom Furnaces, Foundry Core Drying Ovens and any special type of equipment where oil is used for fuel.

"UNION" Saves More Than ANY Other Renewable Fuse

They effect the greatest reduction in fuse maintenance because they are easiest and quickest to renew and withstand the greatest number of blowouts.

Both Renewable and Non-Renewable types have the unqualified approval of the National Board of Fire Underwriters.

Sold by electrical jobbers and dealers everywhere.

Maag Gears

Strongest Where Strength is Needed

THE difference between Maag Gears and ordinary gears is not in the type of the teeth, nor in their number or diameter; but in the shape of the teeth —wide at the base where ordinary gears are often undercut. They are always strongest where strength is needed.

Maag Gears, widest and strongest at the base, are made in all sizes from 2" to 40' in diameter and in spur, helical, herringbone and spiral types.

The Maag Gear Book—No. 265—will be sent you on request—it tells the whole story of these remarkable gears.

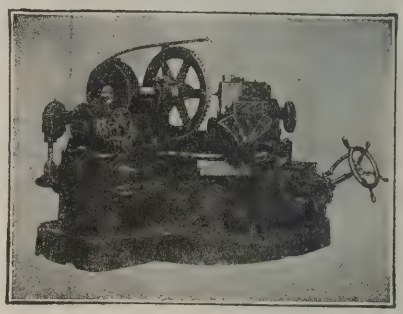
SPIRAL BEVEL GEAR GENERATORS

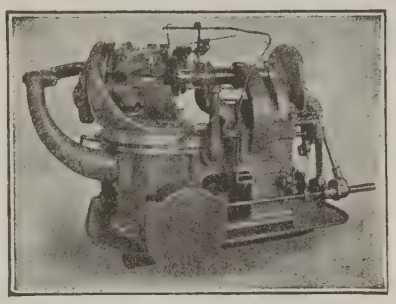
For manufacturing Bevel Gears with spiral teeth. Fully automatic. The Gear tooth is developed by the generating process. A multibladed cutter being used.

Built in 4 sizes 4"-8"-15"-25"

Special purpose roughing machines for Spiral Bevel Gears and Pinions are also built.



15" SPIRAL BEVEL GEAR GENERATOR



FORMING TYPE BEVEL GEAR PLANER

For producing straight tooth Bevel Gears in small lots as would be required for jobbing or repair work. A single tool machine especially designed for quick and easy changing from one job to another.

3 sizes 24" - 37" - 54"

24" BEVEL GEAR PLANER

18" STRAIGHT BEVEL GEAR PLANER

GENERATING TYPE

For manufacturing straight tooth Bevel Gears on a mass production basis. The tools operate with a shearing cut, assuring fine quality.

Two Tools---Universal---Fully Automatic
4 Sizes—3", 6", 18", 25"
Two Tools---Single Purpose---Fully Automatic
1 Size—8" Manufacturing Generator

Large Gear Planers are built as combination Bevel and Spur Gear Cutting Machines.

3 sizes 77"-120"-192"

All can be arranged to cut internal gears also. Tooling is inexpensive. Machines easy to set up and operate.

GLEASON WORKS

MANUFACTURE GEAR CUTTING MACHINES AND HAVE A WELL EQUIPPED GEAR CUTTING DEPARTMENT WHERE ALL KINDS OF GEARS ARE MADE TO CUSTOMERS' SPECIFICATIONS.

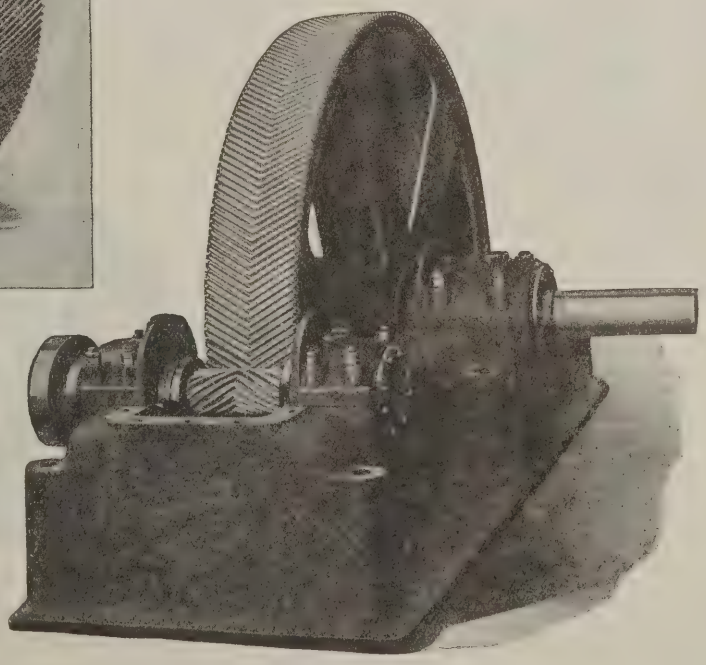
NO GAP AT THE CENTER

FARREL

MADE IN ALL SIZES

Sykes Double Helical Gears

With Generated Continuous Teeth and Sharp Apices



Maximum Efficiency

The gears so generated give better results not only at normal velocities, but at much higher velocities. Elimination of the gap increases the load-carrying capacity of the gear from 15% to 25%, saves space and makes possible the application of machine cut double helical gears where they were found impractical before.

Accuracy

With this process, moreover, it is possible to generate teeth of great precision both as regards profile, accuracy of division and helix angle. The gears, as a result, run really silently and without vibration even at the highest speeds.

Standard Single and Double Reduction Unit

Standard reductions are produced in single reductions from 6″ to 60″ centers and double reductions from 6″ to 20″ centers. These units are complete, and include the Sykes Gears running in oil-tight cast iron cases which have been carefully designed and cover all requirements.

Upon request we will be glad to mail you a series of charts giving the horsepowers which these units will transmit at different speeds of the pinion and for different ratios.

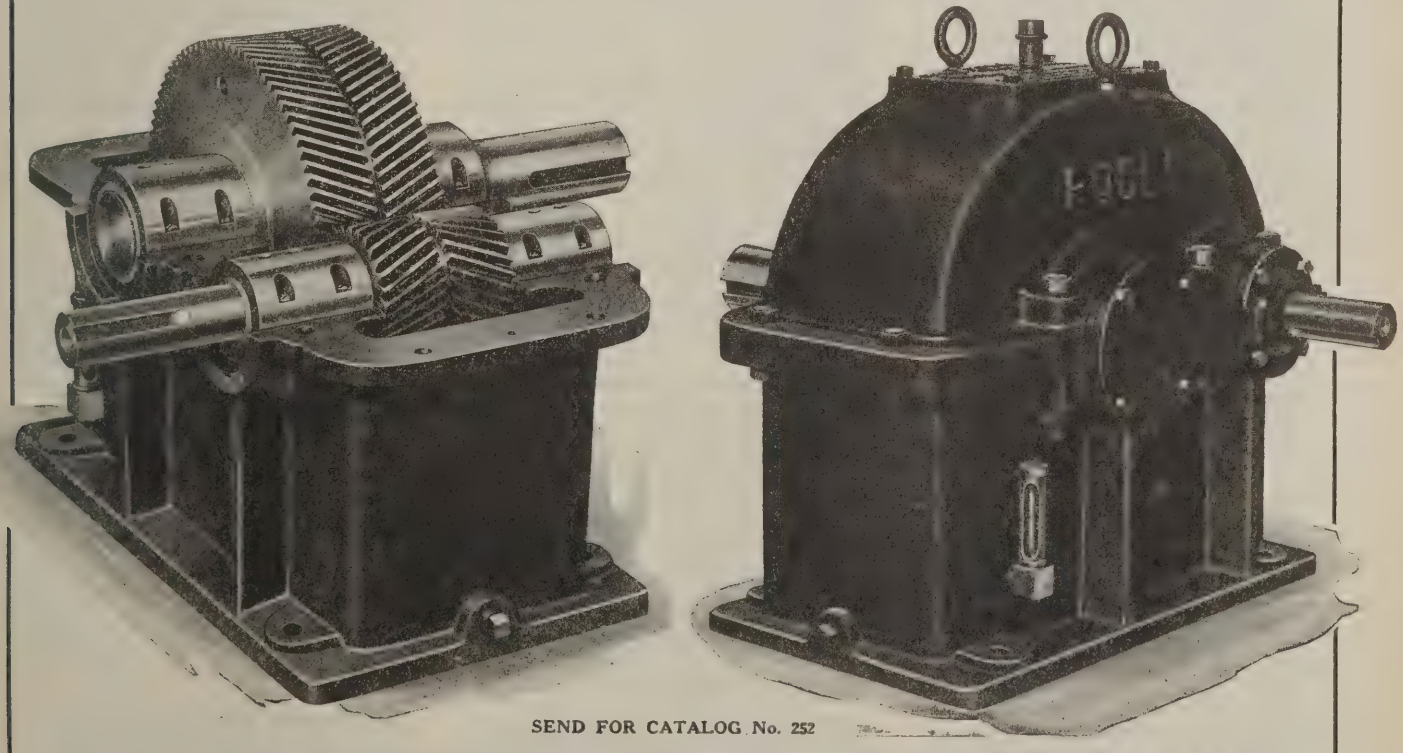
Machine Moulded Gears

The Most Accurate Cast Gear Made



All Sizes and Types for Every Purpose

MADE OF CAST IRON, SEMI STEEL, CHARCOAL GUN IRON

Poole Machine Moulded Gears are made by an improved moulding method. Each tooth is separately moulded and accurately spaced by a mechanical dividing arrangement similar to that used on a commercial gear cutting machine. This method produces cast gears of extreme accuracy in pitch and are practically as accurate as a cut gear. We have 16,000 fixtures for making machine moulded gears ranging in size from 1" to 65'-0" in diameter. These fixtures are available for use of prospective customers, thus eliminating pattern costs.

SPEED TRANSFORMERS

Herringbone Gears have been recognized by engineers as the ideal means for quiet and efficient transmission of power and after years of careful consideration in handling of transmission problems we have developed a totally enclosed reduction gear known as the Poole type H speed transformer for either increasing or decreasing speeds.

Manufacturers of Gears and Power Transmission Machinery since 1843

Main Office and Works: BALTIMORE, MD., U. S. A.

FALK

Herringbone Gears

WE MANUFACTURE a complete interchangeable system of herringbone gears with teeth generated on special hobbing machines with **patented** compensating division mechanism —which insures a degree of accuracy sufficient to meet the most exacting requirements.

The Falk System of staggered teeth, besides giving the maximum contact surface for a given width of face, is invaluable in securing unbroken continuity of engagement and in equalizing wear.

Falk Herringbone Gears are extremely quiet; absolutely free from vibration even at the highest speeds; are equally efficient in both directions; and transmit power with the desired change in the speed of rotation with far less loss than any other type of mechanical power transmission.

Ratios up to 25 to 1 can be obtained with **a single gear and pinion.**

Sizes range from 1 inch to 16 feet in diameter and gears up to 6 feet wide can be cut at one operation.

Falk Herringbone Gears **have no practical speed limit.**

Falk Herringbone Gears cover the whole range of gear requirements.

Falk Herringbone Gear Speed Reducers are built in standard sizes for all kinds of industrial service. Special designs are furnished when desired.

MOSSO C. A. LABORATORIES, INC. (Use OIL-OF-SALT faithfully. Never neglect an injury of any character. The smallest cut, seemingly of little importance, is fully as treacherous as the deepest cut or the most serious injury. To understand that you have but to consider statistics, which prove that over 87% of all compensation paid by liability insurance companies is due directly to minor cuts, lacerations and similar injuries. Do not hesitate to use it for any condition. It is harmless and can be used with perfect safety.
OIL-OF-SALT is used with positive results by government, city and fire department officials, and by hospital authorities in the general manufacturing and transportation fields.

CORRUGATED WIRE GLASS

Strongest Glass Made

CWG is many times stronger than ordinary flat glass. It is $\frac{5}{16}$ in. thick, and weighs 4½ lbs. to the sq. ft. CWG gives a soft, diffused light, with practically no glare or shadow. CWG installations require no up-keep; they last indefinitely. CWG is easily kept clean by ordinary rains. It affords an absolutely water-tight skylight. Is used in roofs, skylights, side-walls, canopies, marquises, louvres; in fact, in whole buildings or wherever MAXIMUM DAYLIGHT is required. (Send for catalog No. 8.)

ACTINIC GLASS

(Heat-intercepting)

Actinic glass excludes about 85% of the Ultra-violet (glare) Rays of the Sun, and about 58% of the Sun's Radiant Energy. It makes a building cooler in summer and warmer in winter. Relieves the eyes; prevents deterioration of fabrics, such as silk and rubber. Is the desirable glass for use in windshields. Made in various patterns and thicknesses. Officially approved by U. S. War Department. (We will furnish report upon request.)

OTHER PRODUCTS

Rough, Ribbed, Figured (Cobweb and Florentine), Polished, Aqueduct (drip-proof). (With and without wire.)
